

# 10MM UNDERLAY

Our 10mm artificial turf underlay can be used under your landscaping turf to provide extra comfort and softness. Perfect for a recreational family that play sports or for under playground areas to soften the inevitable falls. The foam underlay adds additional padding to your backyard turf.

Highly permeable, you do not need to worry about water drainage. Manufactured with a unique closed cell foam which does not absorb water, and with numerous cutouts to allow water to drain through, you will enjoy maximum drainage without compromising the durability of the underlay.

## SPECIFICATIONS
